This is a magnificent Festschrift but no more than William Melody deserves. He has made an outstanding contribution to our understanding of the evolution of information and communication technology over the past half century, and to the problems of regulating and controlling it during a period of revolutionary change in the technology. The Editors of the book have ... insisted on short contributions and this has not only made them very readable, it has also made it possible to include a wide range of papers Furthermore, the Editors have so organised more than 50 contributions that they provide a lively and well-informed commentary

Chris Freeman, Professor Emeritus, SPRU, University of Sussex
